Dear Ahmad,

Thank you for the Round 1 session. We would like to take you to the final stage: the Round 2 assignment.

It is a five-day exercise followed by a ninety-minute working session, and it is the last step before an offer.

Attached are two files:

- The brief. The first page is the schedule. Then read the page headed "The assignment".
- The document pack. Six PDFs from a fictional tender written for this exercise. No confidential Lamar material.

Build a working system that reads those six documents and produces five artefacts — a compliance register, an addendum reconciliation, a one-page list of what would disqualify a bid, a bid programme derived from that register, and a work log. Send back the five artefacts and the repository to this address.

Deadline: 17:00 on Wednesday 23 September 2026, Riyadh time.

Working session: 12:00 on Friday 25 September 2026, Riyadh time. Ninety minutes, by video, screen shared. Have your development environment open — you will change code on the call.

Use whatever AI tooling you like; log it and defend every number. We judge whether the system is right about these documents and whether you can change it live when we hand you an unseen addendum. The bid programme in A5 must be generated by your system from your register, not drawn by hand.

Ask questions at any point to this address. We answer every question to both candidates.

Please confirm by Friday 18 September 2026 that the dates work for you.

Regards,
Hiring
Lamar Holding W.L.L.

Dear Hiring Team,

Thank you. I am glad to reach the final stage, and I want to do this round properly.

One scheduling note. I have just landed in Germany and will be travelling until 28 September. I can work to your original dates if needed, but my strong preference would be to run the exercise after I return, so the five days are worked at my own desk rather than in gaps during a trip. Uninterrupted days with my full environment set up will produce a better and more defensible system, and given how the marks are weighted toward the live session, I would rather be at full strength for it.

If it suits you, I would propose:

Start: Tuesday 29 September
Deadline: 17:00 Monday 5 October, Riyadh time
Working session: any slot in the week of 6 October that works for the three of you

If your schedule does not allow a shift, I confirm the dates as issued, 17:00 Wednesday 23 September for the submission and 12:00 Friday 25 September for the working session, and I will deliver against them from here.

Either way, I am in. Please let me know which you prefer and I will confirm immediately.

Best regards,
Ahmad

17 September 2026 at 20:00

Dear Ahmad,

Thank you — good to hear you are in for Round 2.

We are aiming to close this hire as soon as we can. If you can keep a shorter schedule — ideally closer to the original deadline (Wednesday 23 September, 17:00 Riyadh) and live session (Friday 25 September, 12:00 Riyadh) — that would be better for us.

If you are genuinely under pressure while travelling and need the uninterrupted desk time, we can work with your proposed dates instead:

- Start: Tuesday 29 September
- Deadline: 17:00 on Monday 5 October, Riyadh time
- Working session: a ninety-minute slot in the week of 6 October (we will confirm once the panel locks times)

Please let us know which path you will take so we can lock the calendar. Everything else in the brief and the document pack stays the same.

Regards,
Hiring
Lamar Holding W.L.L.

Dear Hiring Team,

Thank you. I will take the second path: start Tuesday 29 September on my return, with 17:00 Monday 5 October as the outside limit. If it is ready sooner, I will send it sooner.

For the session, I will take the earliest slot the panel can lock

Best regards,
Ahmad

Dear Hiring Team,

Thank you for accommodating my return. Work is progressing well, and I have a few confirmations and questions. Where I state an intended approach, I will proceed on that basis unless you advise otherwise.

Tools

I will use hosted model APIs (such as Claude) and/or local models on my own machine, together with an AI coding assistant, including during the session. All tools and model usage will be documented.

The Pack

Volume III: Volume III (Drawings) is referenced in the RFP, including Drawing 03-C-114, but was not included among the six PDFs received. I will therefore treat it as referenced but not supplied and flag any resulting gaps. Please confirm that the pack is complete as provided.

Third addendum: I am assuming the addendum provided during the session will be a PDF, broadly in the same format as Addenda No. 1 and 2. Please let me know if it will be provided differently.

Earlier questions: If any Q&A or clarifications have already been shared with other candidates, I would appreciate receiving them as well.

Planning Inputs for the Programme (A5)

Planning date: As programme dates are calculated backwards from the Proposal Due Date, I will use the latest addendum date as the planning date. Based on the current pack, this is 22 October 2026, and during the session I will update it to the date of the third addendum. Please advise if you prefer another basis.

Bidder: The pack does not identify the bidder, but some requirements apply to each consortium member (for example, declarations and powers of attorney), so the plan needs a member count. Unless otherwise instructed, I will plan for an unnamed three-member consortium, with the name and number of members as editable settings. Bidder-specific facts not in the pack, such as references, certificates and financial standing, will be flagged for confirmation rather than assumed.

External assumptions: Where the pack does not provide information such as Saudi public holidays, document-issuance durations, or bid-team roles, I will use reasonable external assumptions and clearly label them as editable assumptions with their basis.

Delivery

Formats: I plan to submit one archive containing:

- A1 and A5: CSV and JSON, with A1 also in Excel.
- A2: Markdown report with supporting CSV/JSON tables.
- A3: One-page PDF.
- A4: Repository including commit history, prompts, model-call log and work log.

The outputs can be rebuilt offline, so no API key is needed and none is included.

Kind regards,
Ahmad
